

# **RDS Advantage®**

## Tutorial

### **ODBC & Field Names** (Open Database Connectivity)

## **ODBC - Open Database Connectivity**

Open Database Connectivity is a standard application programming interface (API) which provides access to a variety of databases.

In the RDS Advantage™ system, ODBC can be used to access the RDS Advantage data files. One of the uses is to provide access to report writers, such as Crystal Report Writer to generate customized reports. ODBC may be used while in a word processor or spreadsheet to extract data from the RDS Advantage data files, and merge into a word processing document.

RDS Advantage provides access to the RDS Advantage database from Microsoft® Office products (for example, Microsoft® Access and Microsoft® Excel), Lotus 1-2-3 , Crystal Reports®, and any other 32-bit ODBC-enabled application. Its industry-standard ODBC driver technology, in both stand-alone and client/server configurations, supports the ODBC version 2.5 API (level 1) and SQL92 entry level syntax plus extensions, and provides access to Synergy databases on IBM AIX, SCO UNIX, and HP Tru64 UNIX servers.

A simpler way to use Crystal Report Writer with the database is to use the RDS Advantage MergeRight applications. These select the data you want from the database and place it in a file. This file can be used by Crystal to generate custom reports. The advantage of this method over ODBC is that the Merge programs do the linking for you, while you must do the linking in ODBC.

### **Repository Files**

When accessing RDS Advantage data using ODBC, the data is listed in the RDS Advantage Repository. See a list of Repository (field name) Files on the following pages.

### **ODBC with Microsoft Word**

Instructions to access RDS Advantage database from Microsoft Word, Version 2000, using ODBC (Open Database Connectivity):

(Note: Different versions of Microsoft Word will function differently)

From the Tools menu select `Letters & Mailings.'

Choose Mail Merge Wizard

From the Mail Merge Wizard window choose `Letters' and click on `Next.'

Choose `Use current document' and click on `Next.'

Choose `Use existing list' and click on `Browse.'

If using the first time, choose `New source' and click on `ODBC DSN' and click on `Next.'

Choose `xfODBC' and click on `Next.'

Select the files you want to be used in Microsoft Word.

Crystal Report writer can be purchased. It can use ODBC to access the RDS Advantage database to produce custom reports, charts and graphs.

Note: Crystal Report writer support is not included by RDS Advantage.

Connect name to use for ODBC: TESTINGUSERUSER

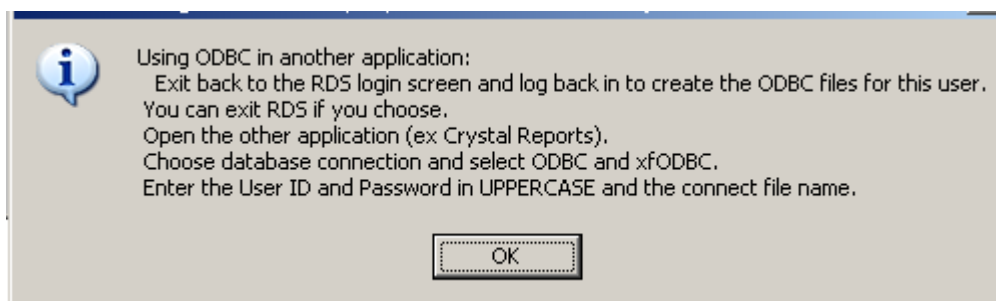

OK

Set up the ODBC "Connect name". It will be forced to have NO spaces.

If Synergex's ODBC Connectivity is NOT installed you will see this message:

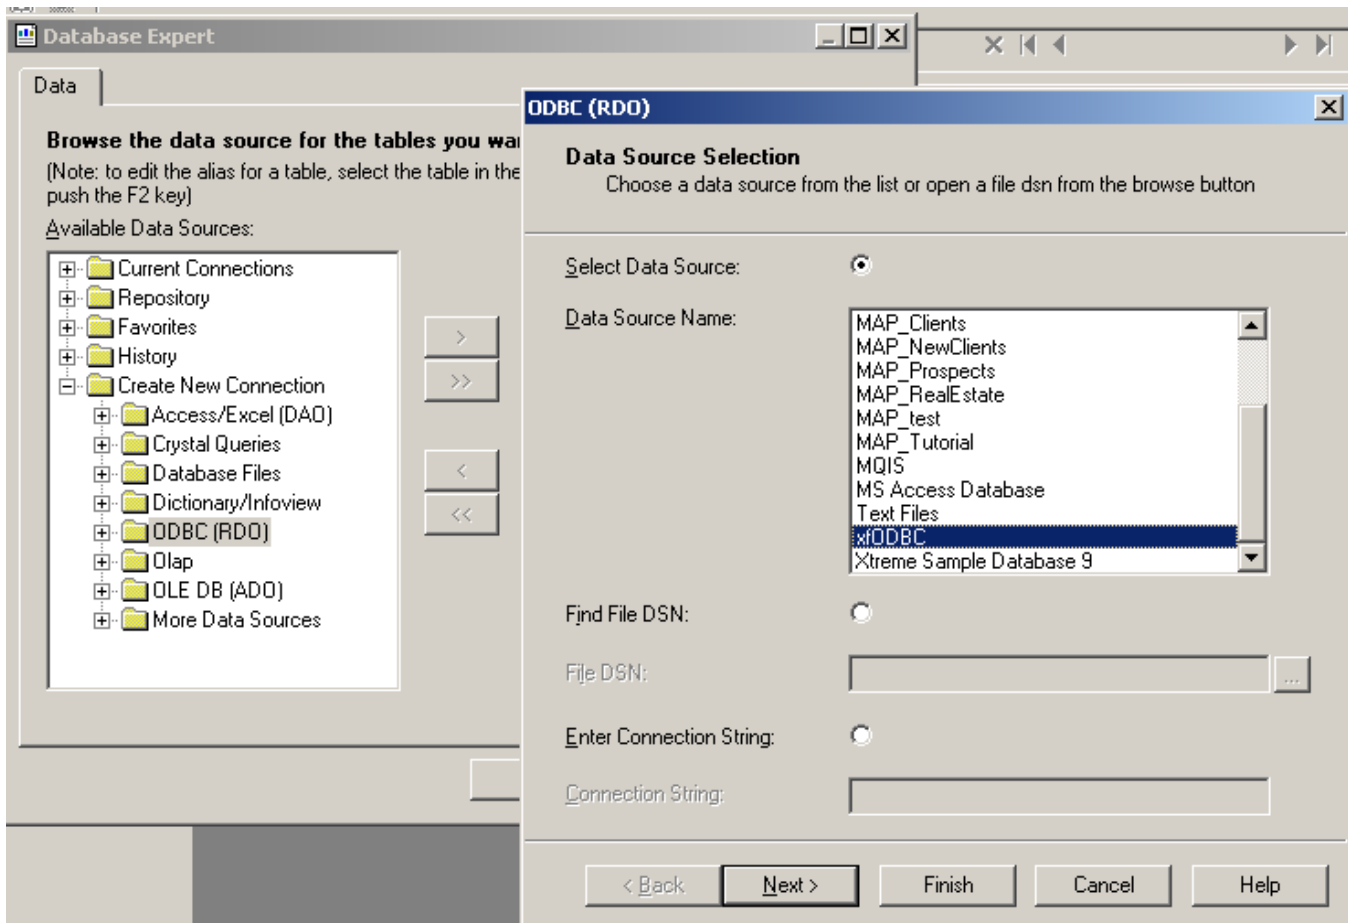

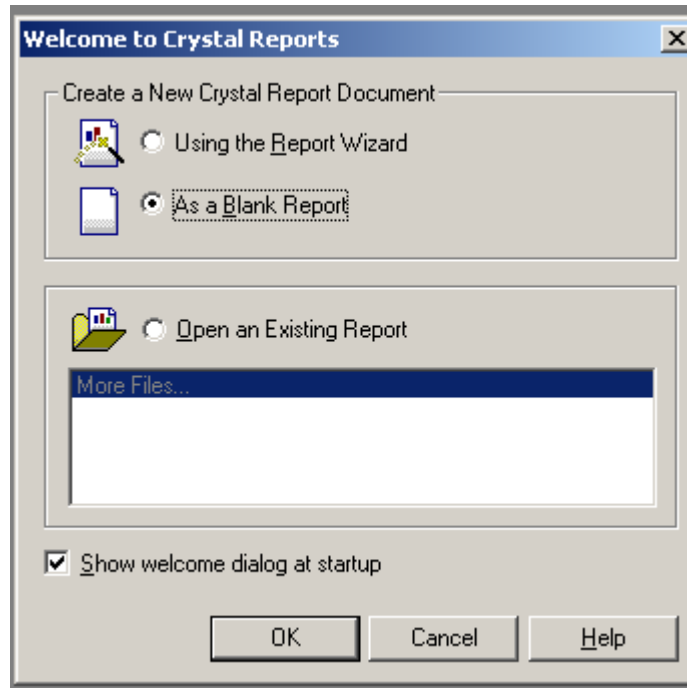

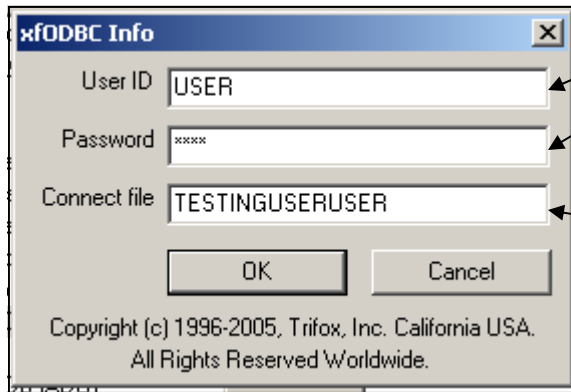

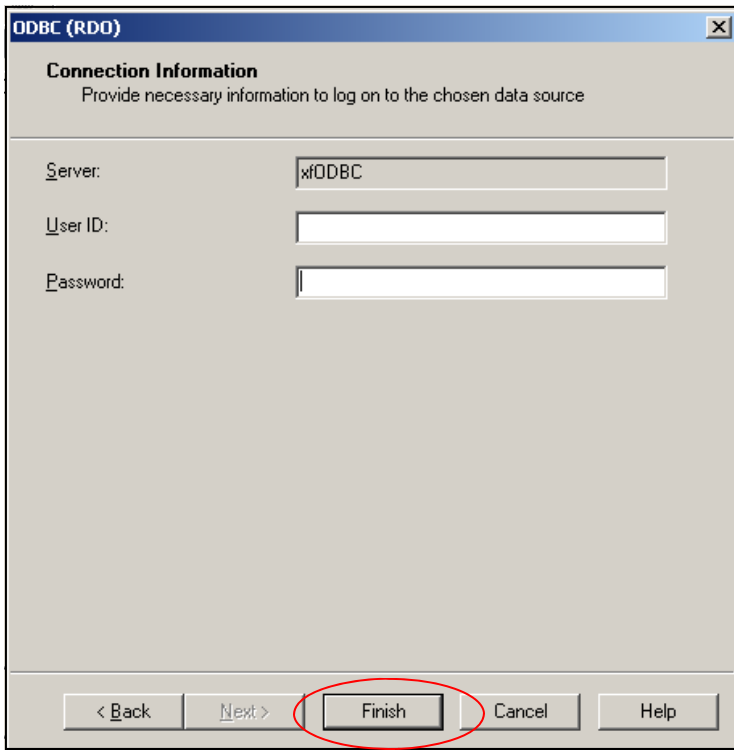

After entering or changing the name the user will receive this information about how to use ODBC:

Log out of the RDS Advantage software and log back in and your ODBC connect files will be created.

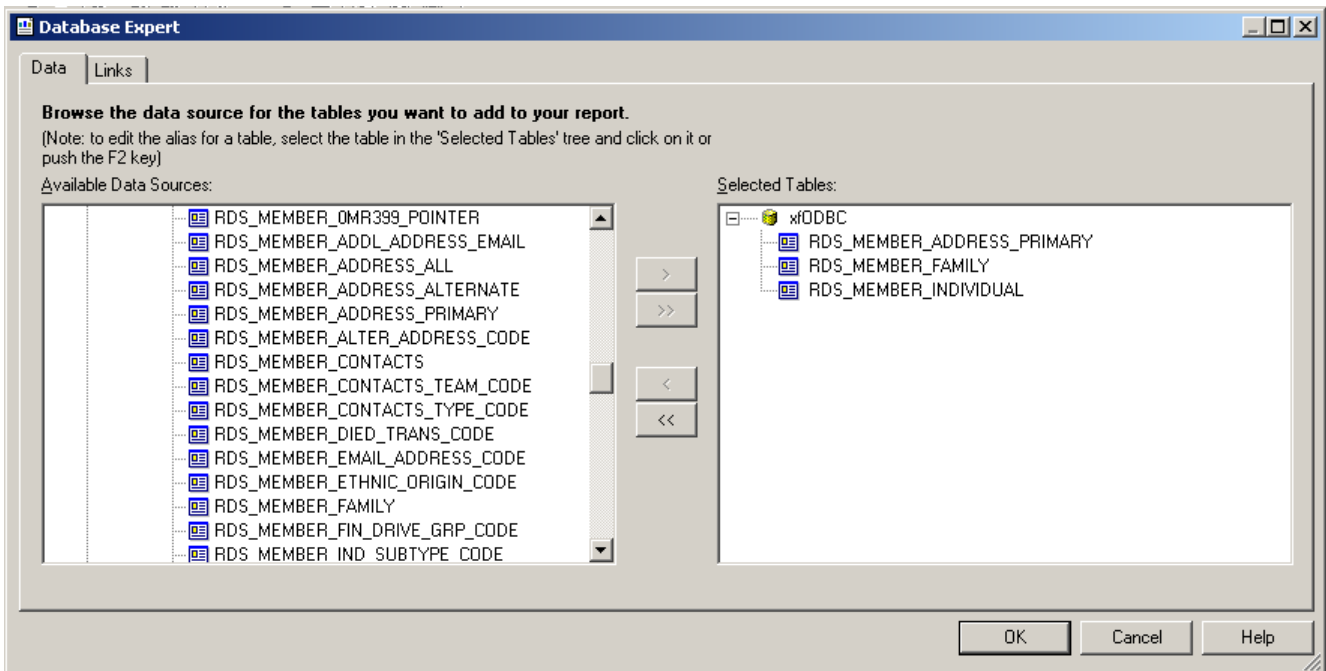

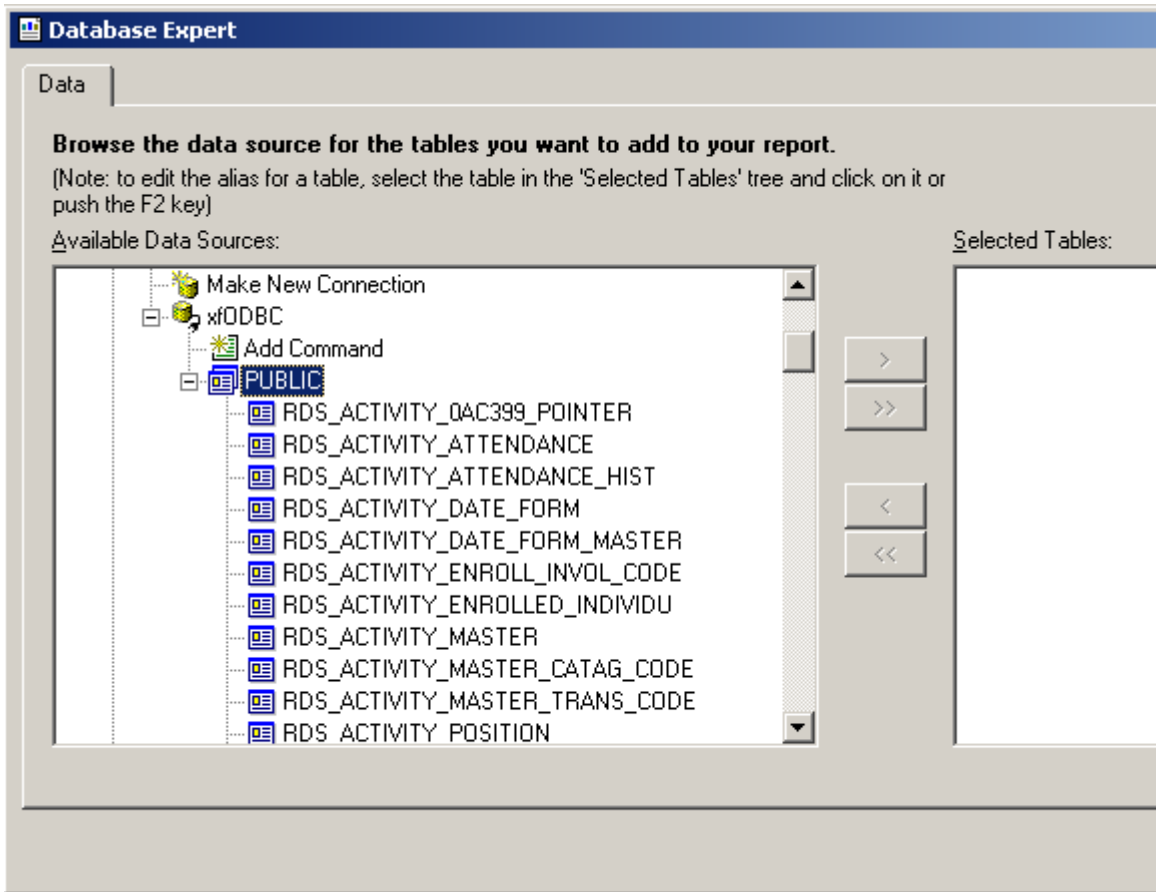

# Crystal Reports and xfODBC

Be sure to enter your RDS login in upper case

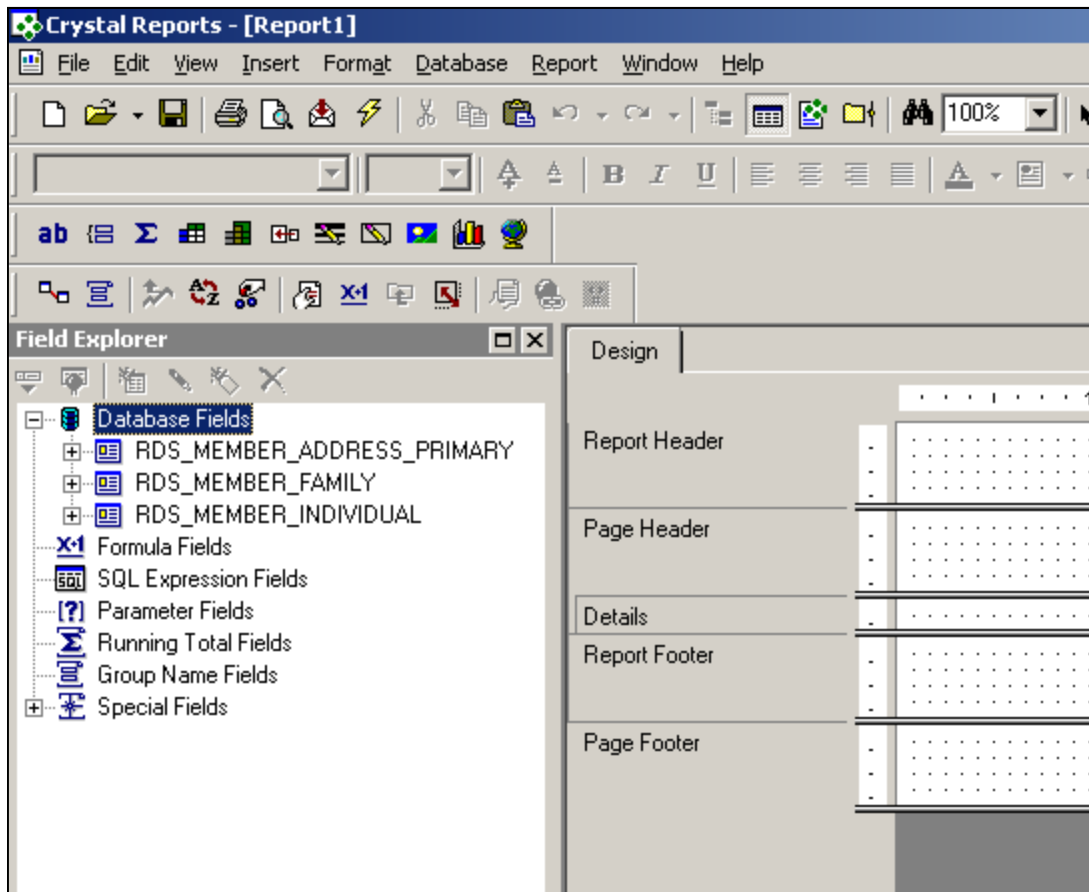

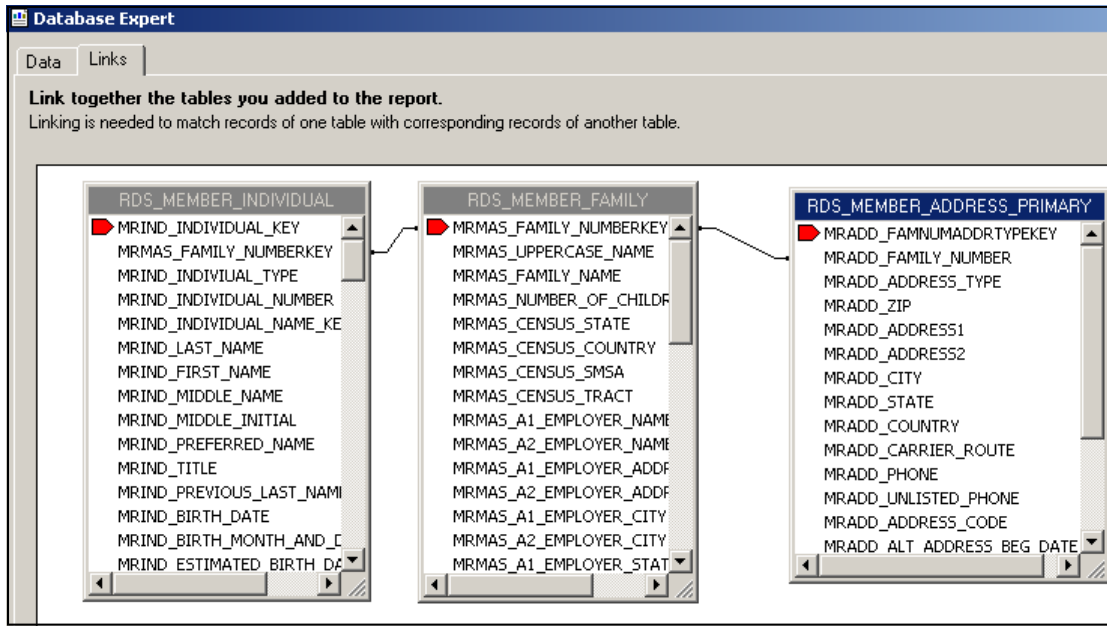

Enter the ODBC connect name you entered in the RDS Advantage program CS202

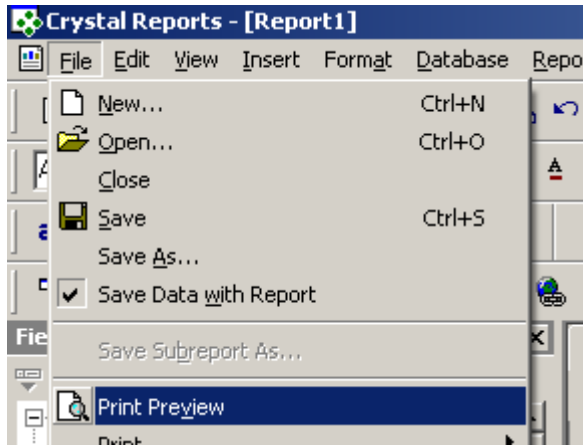

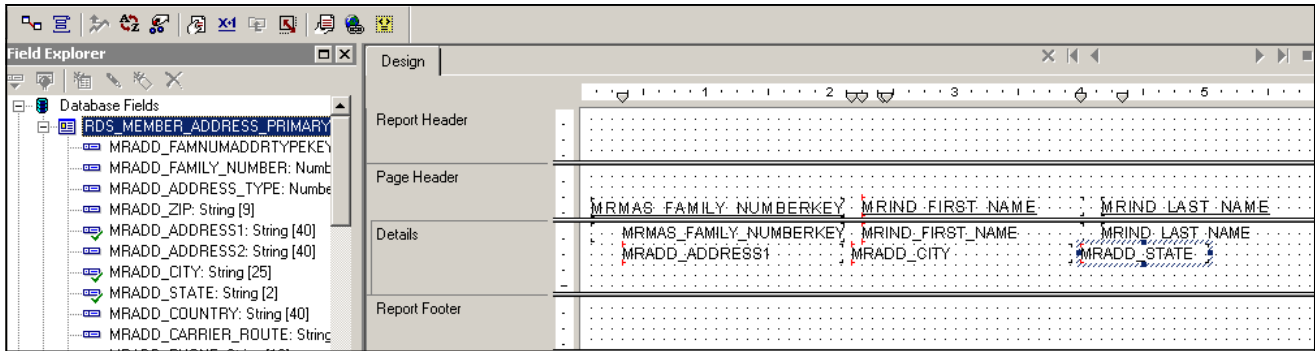

## Example of Links

Some links will be setup automatically—some you may have to add.
